

TOKN's next gen productivity platform, secured with features including intuitive pre-designed app templates, pre-built automations and workflows centrally-managed over devices enhances communication and operational speed.

Harnessing Mobile Productivity

The TOKN Platform is a low-code app development and Integration Platform as a Service (iPaaS) that bundles all of the capability required to easily connect systems and quickly build and deploy apps, across all devices.

Our partners and integrators benefit by easily connecting the systems and data that our clients are already using, into one seamless and self-service platform. The TOKN cloud platform allows businesses of all sizes and budgets to rapidly deliver critical business applications without the associated costs of additional software or publishing issues.

- Accelerated productivity gains
- No hardware installation
- Process automation and efficiency improvements
- Seamless app delivery across all devices - no more app store issues
- A more engaged and connected workforce
- Secure multifactor authentication
- Offline working capability
- Device flexibility
- Improved compliance

User Led

Inspire and evolve, user led innovation.

Instant Integration

Secure, integrated and available where needed.

Value Add

Scalable and agile, driving real transformation.

Reliability

Scalable and stable user experience that is sustained and renewed.

Platform Capability

Scalable delivery - Native Cloud Services with guaranteed availability and elasticity.

“Things” management with Industry 4.0 (IoT) Edge Services.

Bring Your Own Device means that work gets done faster, easier and from anywhere.

Secure and controlled app and device management.

Flexible application deployment, to any device.

Password bifactor authentication.

No more app store issues with seamless app delivery in minutes across iOs, Android and Windows.

Accelerated app delivery with the TOKN out-of-the-box template library.

Our Company

TOKN is a digital technology company creating innovative enterprise software solutions that enable mid tier enterprise organisations, in the Australian and global markets, to substantially improve productivity by removing duplication and waste from their processes.

As a Perth based company, formed in May 2016, TOKN has a passionate, local development team that are focused on product development, distribution and customer satisfaction. With a growing base of local and international enterprise customers, TOKN is growing at a substantial rate.

TOKN works closely with it's expanding partner and reseller base, with partners signed across Australia, New Zealand and the United Kingdom. The TOKN solution is closely aligned and certified with major ERP software solutions such as SAP, IFS, Xero, MYOB Greentree and MYOB Advanced.

“ With help from TOKN, our asset management systems and processes have gone from good to great. All stakeholders of our business have benefited from the TOKN apps.

Stephen Ardnt - Managing Director

TOKN Mobile Client

TOKN is comprised of pre-built Native Clients, available on each of the IOS, Android and Microsoft App stores. These predeveloped native apps facilitate the deployment of applications seamlessly, without any app store publishing issues. This is know as the “app within an app” concept, which is unique to TOKN.

The TOKN client provides secure containerization for all mobile applications, installed on each device, that secures your applications and data. TOKN separates work and play on the device, leaving you free to choose your device type.

The TOKN Client enables full offline processing functionality and bring your own device (BYOD) capability. The TOKN Client includes Bi-factor authentication services that enables seamless log-in, allowing the end users to easily enrol themselves in one easy step.

TOKN Management Console

The TOKN Console is the administration application for the TOKN platform that runs on the TOKN Cloud. The console is used to handle the TOKN services for your organisation. An administrator can simply log in the registered account (with no installation needed) and have instant access to all of the TOKN Platform capability, in one place.

TOKN runs on AWS and is tenanted at the Sydney data centre, using containers that automatically scale up and down in size, as needed. The TOKN Management Console is comprised of 5 key components; Connect, Workbench, Workflow, Control & Sense that all work seamlessly within the TOKN Mobile Client.

Connect

TOKN Connect is a comprehensive enterprise integration framework allowing quick and secure configuration of connections to external systems, using a variety of services.

Administration users can interrogate an API, select required fields, create data structures and connect to external systems to fetch and post data. Any external system that uses open APIs or REST/SOAP/OData can be connected to TOKN.

Workbench

The TOKN Workbench allows administrators to collaboratively build intuitive applications quickly, that drive value.

TOKN Workbench includes:

- Code editors to complete more advanced app builds
- Pre-built app components accelerate the build process
- Template libraries of pre-built app templates
- Code upload functions to import code snippets
- App testing tools to visualise mobile applications
- Code promotion features to seamlessly promote code between DEV, WAS & PRD instances.

Workflow

TOKN Workflow simplifies the lifecycle management, deployment and workflow creation.

TOKN Workflow unifies end user data across different business systems, providing a high degree of flexibility in how a user might interact with different connected systems.

Users creation can be automated using one of TOKN's micro services, such as the TOKN Active Directory Service.

Control

Securely manage connected devices using the enhanced device management capability embedded within TOKN Control. TOKN Control provides a comprehensive device management framework, with a complete view of and control over all connected devices.

TOKN Control includes:

- Device manager listing all connected devices
- Geo-location including geo-position and geo-ring fencing
- Enhanced security features: remote wiping & blacklisting
- Embedded app analytics, reports and change logs
- System logs, traffic logs and connected device logs

Sense

Investigate potential faults before your customers even know there is a problem, with TOKN Sense. Retrofit existing equipment with sensors and start collecting live data that is transmitted via nodes to TOKN Sense, in the cloud.

Dashboards are used to analyse the data, highlight trends, predict component failures, send alerts and create jobs in connected systems when readings are outside the specified range.

Content Management System

The TOKN CMS connects and engages your workforce by distributing information through the TOKN Mobility Client App, replacing the need for intranets or portals for workers on the go. Give your organisation an identity and create a “window” into the organisation, while reflecting your organisation's brand, style and image.
