

Enzen and TOKN announce new partnership to transform enterprise mobility within Australian utilities

The collaboration sees the launch of a new low-cost, low-code solution that will improve the efficiency of power, water and gas operations

Adelaide, 21 February 2023. Enzen, the global knowledge enterprise specialising in energy and water, has partnered with leading enterprise mobility innovator TOKN to launch a new cloud-based solution that will accelerate the digitalisation of Australian utilities.

TOKN is an award-winning global innovative software company, specialising in low-code app build, integration and device management. Through TOKN's patented Integration Platform as a Service (iPaaS) technology, the two companies have developed ZenConnect – a customisable mobile solution that enables power, water and gas field operatives to access real-time information about network assets in a streamlined, user-friendly way.

By seamlessly assimilating data from different sources and systems, ZenConnect offers asset, customer and supply chain teams a unified experience of utility assets. Through a single interface that's aligned to global best practices, operatives can access location, site, performance and inspection history data with ease, improving workflow management, operational efficiency and productivity in the process.

Through ZenConnect, utilities will benefit from superior data quality, more standardised, automated business systems and a more connected, empowered workforce. Removing utilities' dependency on legacy applications that are no longer fit-for-purpose, ZenConnect will also crucially reduce enterprise expenditure and enable networks to evolve their operations efficiently in a digitalised world.

Dina Williams, Executive Director and Head of Digital Enterprise Solutions and Transformation at Enzen Australia, said: "There is a growing need in the Australian utilities market for a mobile enterprise solution that enables networks to transform their operations in line with the demands of the energy transition.

"The combination of Enzen's deep domain utilities knowledge and TOKN's innovative technology give power, water and gas networks a huge opportunity to accelerate their digitalisation at low cost. Built

specifically for utilities, ZenConnect integrates with most enterprise systems and mobile devices, is highly configurable and can be rapidly deployed across different functions.”

Clinton Schroeder, CEO and Founder of TOKN, said: “We are excited to form this partnership with Enzen. Both our organisations have a common strategy to drive the digitalisation of enterprise in industry through best-of-breed processes that deliver advantages in productivity, efficiency and safety. We’re looking forward to rolling out this customised, flexible solution for the Australian utilities market and beyond.”

ZenConnect utilises the TOKN platforms full mobile device management capability, and seamlessly works on iOS/Android/tablets/desktop with no specialised adoption and also offers offline capability. It integrates with multiple backend systems, SAP/Oracle/IFS, GPS and other native phone features such as bar code scan, photos, videos, notations, chat and emails.

About Enzen

Enzen is a global, professional, knowledge enterprise that focuses on gaining, refining and sharing expertise in the energy and utility sector. It provides strategic advisory and execution of outcome-driven solutions to over 250+ leading businesses, governments, non-governmental organisations, and not-for-profits.

Enzen aspires to make energy and water accessible, affordable and sustainable for all through innovative models, technology and applications. We work with customers across the value chain to deliver sustainable and lasting improvements to their efficiency and performance, increasing their value to their customers and owners.

Our goal is to support large consumers of energy and water and improve the sustainability of resources by increasing efficiency and optimising existing operations. Besides this, we develop the commercially successful use of renewable resources to deliver a transformative advantage for our customers.

Enzen is unique in providing a wide range of strategic advisory, engineering services and solutions from end-to-end for the power, water, gas and renewable energy sectors, supported by our specialised and unique Centres of Excellence. It’s this focus on sector expertise, experience, insights and learning that means we define our employees as ‘knowledge practitioners’.

The business, founded in 2006, now has a presence in Australia, Africa, India, Portugal, Spain, Turkey, the UK and the US. Visit enzen.com.

About TOKN

Found in 2016, TOKN is an award-winning software company. Its flagship product is a cost-effective workforce automation platform, connecting employees and delivering real-time information to keep them safe, up-to-date and more productive.

TOKN has a unique, patented and flexible technology platform-as-a-service and cloud architecture that drives out-of-the box value for its enterprise customers. TOKN provides a low-code application development environment and a host of digital app template solutions for workplace safety, comms and asset management, all of which are fully integrated.

TOKN is used globally across multiple industries. With a growing base of local and international enterprise customers, TOKN looks to partner with industry to help bring more innovative solutions to customers. Visit www.tokntechnology.com.
